

Washington University in St. Louis, Department of Anthropology

Program Information	
Program Name	Washington University in St. Louis, Department of Anthropology
General Description / Special Programs	Program strengths in archaeology include the origins of agriculture and pastoralism, ethnoarchaeology, paleoethnobotany, zooarchaeology, geoarchaeology, and the prehistory of North America, Central Asia, East Asia, Europe, Africa, and South America. The overall focus of the sociocultural subfield is culture and political economy, which encompasses the study of nation-building and local identities, political ecology, political economy of development, postcolonialism, and the political economy of health. Sociocultural faculty have active research projects in Africa, Indonesia, India, Central Asia, Latin America, North America, the Middle East, Europe, and Tibet. The biological anthropologists have a program emphasis in human evolution, primate behavior, ecology and evolution, quantitative studies of morphology and genetics, with ongoing paleontological, behavioral, and ecological field research in Africa, Madagascar, Europe, and South America. The department is actively expanding its program for training and research in medical anthropology, and applications from qualified students are encouraged. Strong links with academic and clinical programs at the medical school permit the development of integrated medical anthropology research projects, which draw upon the resources and strengths of the University and the community.
